Objective

I am an AI & Data Science engineering student with strong programming fundamentals and experience building end-to-end software solutions. Skilled in Java, Python, C++ and REST APIs, and basic frontend development using React. Currently building knowledge in embedded application development, and seeking roles where I can contribute to system integration, diagnostics platforms and end-to-end software delivery.

Skills

- **Programming and ML:**
 - Java, Python, C/C++, PyTorch, JAX, REST APIs, Multithreading basics, Performance-oriented coding
 - **Core Concepts:**
 - Data Structures, OOP, SDLC, REST APIs, V-model SDLC, Embedded systems, Debugging & Integration Testing
 - **Tools & Platforms**
 - Linux OS, VS Code, Git/GitHub, Jupyter Notebook, Power BI, Tableau
 - **Databases & Cloud:**
 - MySQL, SQLite, Firebase, Docker AWS (basic), Monitoring & Logging concepts, Azure Cognitive Services (basic)
 - **Web, DevOps & Project Management:**
 - HTML, CSS, Shell Scripting, JavaScript, React.js (basic), Netlify, Vercel
-

Education

- **B.E. Artificial Intelligence & Data Science** (Expected 2026)
CMR Institute of Technology, Bangalore - CGPA: 8.71
 - **Pre-University Course (PCMB)**
Royale Concorde PU College, Bangalore - 87.5%, 2022
 - **10th Standard (SSLC)**
Narayana E-Techno School, Bangalore - 64.6%, 2020
-

Experience

Data Analytics Intern -- Pratinik Infotech, Bangalore

September 2025 – October 2025

- Implemented data processing scripts using Python and Pandas to clean and transform raw datasets.
 - Designed reusable SQL queries and data workflows to support analysis and reporting needs.
 - Focused on improving data reliability, reusability, and clarity for downstream usage.
 - Performed integration, version control, and testing tasks using Git and modular development practices.
-

Projects

Task Management System with Audit Logs:

- Built a task management web application with audit logging to track task updates and user actions.
- Designed audit log mechanisms to record create, update, and status-change events with timestamps.
- Developed a React-based frontend for task creation, updates, and activity tracking.
- Worked through design, implementation, and validation stages following structured SDLC and testing workflows.
- **Tech:** Java, REST APIs, React.js (basic), HTML, CSS, JavaScript, MySQL

Sentiment Analysis on Twitter Data:

- Collected and preprocessed 50,000+ tweets using Twitter API and NLTK.
 - Implemented a backend service in Python to process text input and generate sentiment predictions.
 - Built a React-based frontend to interact with the backend and display results.
 - Integrated backend and frontend components and performed functional testing and debugging across modules.
 - Generated visual reports and dashboards to communicate insights clearly to stakeholders.
 - **Tech:** Java, Python, Flask, REST APIs, React.js (basic), HTML, CSS, JavaScript
-

Certifications

- AI Fundamentals – IBM SkillsBuild
- Data Analytics Virtual Experience – Deloitte (Forage)
- Solution Architecture Virtual Program – AWS (Forage)
